

PROCRASTINOT

Orbital 2026

Intelligent web app to **automatically consolidate, predict, and manage deadlines**

MOTIVATION

As university students, we face daily challenges managing academic deadlines across multiple platforms and tools.

This is a **systems problem** — not a discipline problem.

AIM

KEY FEATURES

PDF & Text Extraction

Extract assignment names, due dates, and exam dates using AI parsing

Canvas LMS Integration

Automatically sync course info, assignment, and due dates)

Unified Dashboard

Filter by course and date range

Workload Forecasting & Visualisation

Heatmap to visualise workload spikes and predict busy periods

Assignment Decomposition

Breaks assignments into subtasks with recommended completion timelines

Collaborative Team Features

View project team's workload, shared progress tracking

ROADMAP

Milestone 1

Technical proof of concept

PDF → Claude API extraction pipeline

Basic React dashboard (mock data)

FastAPI + PostgreSQL schema

Milestone 2

All core features + user testing

Canvas LMS integration complete

Workload heatmap & calendar view

Assignment decomposition (Claude AI)

Milestone 3

Extension features & polish

Collaborative team features

Admin dashboard & data export

Full documentation & demo video

Round 2 user testing

SWE PRACTICES

Version Control - Git branching workflow enables effective version control and collaborative code reviews through pull requests.

Git Issues - GitHub Issues are used to track bugs, tasks, and feature requests, improving software stability and team coordination.

Usability Testing - 2 rounds with 5 to 8 students each, Github logged

TECHSTACK

FRONTEND:
React, Tailwind

BACKEND:
Python, FastAPI

DATA & AI:
PostgreSQL
